SUBJECT	**INTRODUCTION TO PHILOSOPHY OF THE HUMAN PERSON**
GRADE LEVEL	12
CONTENT STANDARD	*The learner demonstrates various ways of doing philosophy*
PERFORMANCE STANDARD	*The learner evaluate opinions*

I. INTENTIONS

i. Learning Competencies	`Distinguish opinion from truth Realize that the methods of philosophy lead to wisdom and truth Evaluate truth from opinions in different situations using the methods of philosophizing`
ii. Learning Objectives	Knowledge: Define and differentiate truth from opinion through the lens of correspondence, coherence, and pragmatic theories of truth. Skills: Apply Socratic questioning and phenomenological reduction to analyze contemporary issues. Attitudes: Develop intellectual humility and critical skepticism toward information consumption in digital spaces.

L. LEARNING EXPERIENCE

i. Learning resources	A. HAYO: Access to internet-enabled devices, case study packets on 'Post-Truth Era', and Socratic Seminar templates. B. HINAY: Simplified graphic organizers comparing objective facts vs. subjective biases, and scaffolded sentence stems for critical discourse.
ii. Pre-lesson activity	Name: 'The Fact-Checker's Gambit'. Directions: Students are presented with a series of flashcards containing statements; they must place each on a 'Spectrum of Certainty' ranging from 'Indisputable Fact' to 'Personal Bias'. Scoring: 5 points for accurate classification, 10 points for a substantiated philosophical justification provided within 30 seconds.

iii. Lesson flow	**DAY 1: The Architecture of Belief: Fact vs. Opinion** The session commences with an epistemological grounding exercise where learners dissect the nature of 'propositional truth.' Through a lecture-discussion, the teacher introduces the correspondence theory of truth, facilitating a Socratic dialogue on why human perception is often colored by cognitive biases. Students will map out their own beliefs on a 'Certainty Grid' to observe the distinction between empirical claims and individual perspectives. **DAY 2: The Philosopher's Crucible: Methods of Inquiry** Learners engage in a 'Phenomenological Workshop' where they perform an epoché (suspension of judgment) on popular viral media content. The task requires students to strip away emotional framing and descriptive adjectives to isolate the core objective data. Using the Socratic method, groups must interview one another to uncover hidden assumptions in their initial assessment of a given news article, focusing on the rigorous process of peeling back layers of opinion. **DAY 3: Navigating the Post-Truth Labyrinth** Implementation of a 'Dialectical Mediation Tool.' Students are organized into triads to simulate a formal debate where one member proposes an opinion, the second plays the skeptic using logical rigor, and the third acts as a mediator identifying logical fallacies. This intervention tool forces students to recognize how opinion masquerades as truth in political and social spheres, sharpening their capacity for intellectual discernment. **DAY 4: Synthesizing Wisdom in Community** Students collaborate in 'Wisdom Circles' to produce a 'Philosophical Manifesto on Truth-Seeking.' They synthesize lessons from the week to create a localized guide on how to evaluate information presented by influencers or online sources. Peer feedback is facilitated through a 'Critical Friend' protocol, where classmates critique each other's manifestations for clarity, logical consistency, and adherence to philosophical inquiry methods. **LET'S REFLECT ON IT!** *I used to think that truth was simply what most people agreed upon, but now I realize that truth requires a rigorous process of questioning and the systematic elimination of personal bias through objective analysis.*
iv. Opportunities for integration	Media and Information Literacy (evaluating fake news); Personal Development (self-awareness and emotional regulation); English for Academic and Professional Purposes (argumentation and logical structure).

A. ASSESSING LEARNING

i. Formative assessments	Look-fors: Ability to cite the specific theory of truth used, detection of ad hominem or hasty generalization fallacies in peer arguments, and evidence of the 'suspension of judgment' in their written

	outputs. Method: Rubric-based assessment of the Manifesto and a structured observation checklist during the Dialectical Mediation.

W. WAYS FORWARD

i. Reflective practice	Did the students demonstrate a transition from passive consumption to active interrogation of information? Which specific misconceptions regarding 'my truth' versus 'the truth' remain unaddressed? How can the classroom environment be adjusted to foster deeper intellectual discomfort and growth?
ii. Extended learning opportunities	Curate a collection of three conflicting headlines regarding a current societal issue. Write a 300-word philosophical reflection paper identifying the opinions embedded in the phrasing and perform a 'fact-check' using at least two independent, verified primary sources.
